Greater Detection of Breast Cancer
Superior imagery for a more accurate diagnosis
Better for Everybody.

For the Patient:
A LIFE-SAVING ADVANCE IN THE FIGHT AGAINST BREAST CANCER
Paris Regional Medical Center is now home to the most modern mammography equipment available today. This powerful technology detects up to 28% more cancers in women 50 and younger and in difficult-to-image categories compared to traditional mammography techniques, according to the American College of Radiologists (ACR). That’s especially important to consider when the American Cancer Society recommends an annual mammogram for all women starting at age 40.

Breast Cancer is the second leading cause of cancer death among American women. Fortunately, when diagnosed at a localized stage, the five-year survival rate for breast cancer is 98%. Early detection is critical. And that makes choosing Digital Mammography from Paris Regional Medical Center a smart decision.

Consider the many patient benefits:

FASTER EXAM
A typical Digital Mammography exam takes only 15 minutes, twice as fast as a conventional film-based mammography.

MORE COMFORTABLE
With our Digital Mammography System, patients enjoy a relaxed and comfortable position during the exam. Flexible ergonomic paddles, even for very small breasts, improve patient comfort and image accuracy. MammoPads® used to reduce the discomfort for the patient’s exam.

LESS EXPOSURE
Digital Mammography uses less radiation than a traditional film-based mammography exam.

FEWER FOLLOW-UP TESTS
Digital Mammography’s high quality images give physicians more information, so there’s much less need for a second exam. Our images are read and interpreted by breast specialists.

For the Doctor:
IMAGE QUALITY AND TECHNICAL EXPERTISE
Paris Regional’s Hologic Selenia System increases contrast and visibility of lesions in dense breasts, with optimized level of dose. This latest innovation delivers a level of image quality, processing speed, and patient comfort. The use of MammoPads® allows for the ideal positioning of the breast for the mammogram. Consider just a few of the many technological advances that will benefit both your patients and your practice.

Consider the many technological benefits:

DETAILED IMAGING
Featuring the Hologic Selenia platform for both current and future applications, our Digital Mammography system delivers incredibly sharp images through the elimination of light diffusion found on other machines. Quality checks occur within seconds of acquisition to confirm image quality during the exam.

DIGITAL POWER
In terms of speed and efficiency, reviewing images electronically is light years ahead of traditional film-based mammography. Patient images can be sent to PACS, printers, CAD and review workstations.

ELECTRONIC ARCHIVE
Retrieve and transmit patient images from your home or office for faster access and greater convenience.

FAST, PRECISE OPERATION
Our system features precise and intuitive operation, enabling fast, efficient exams with few retakes.
